

HealthTech is a gold-level sponsor of the National Rural Health Association

# myCLAIMIQ AlphaCollector

## Improve Collector productivity by upwards of 50 percent

Over the years, HealthTech has helped many hospitals who relied on outdated and inefficient billing and collections systems as part of their revenue cycle. As a result, they failed to collect hundreds of thousands of dollars in patient revenue.

To address this need, HealthTech's software engineers developed a web-based collections management and reporting software — myCLAIMIQ AlphaCollector. AlphaCollector is designed to improve efficiency within the hospital revenue cycle while decreasing revenue leakage. By utilizing this software, we have helped hospitals shorten their reimbursement cycles and increase collections.

### Features and Benefits of myCLAIM AlphaCollector:

- Increase collector productivity from upwards of 50%
- Robust reporting capabilities for managing collections process and collector productivity
- Pivot table technology to analyze AR on any data points and for multiple facilities
- Prioritize accounts by dollar amount or ETC
- Assign accounts by collector(s) to create work groups
- Quick snapshot of hundreds of account notes for review
- Interfaces with existing billing and collections systems

While other systems require collectors to view up to 13 screens per claim, HealthTech's myClaimIQ AlphaCollector can perform the same function in just 3 steps, saving collectors up to nine minutes per claim. Over time, this amounts to huge savings in the cost to collect as well as overall improvement in cash collections. In addition, if your hospital combines myCLAIMIQ AlphaCollector with HealthTech's myCLAIMIQ AutoStatus, collector productivity can improve by up to 75%.

HealthTech's myCLAIMIQ AlphaCollector is a customer-oriented web software application that can be implemented quickly through a fast, secure online download. It requires no databases or servers, reducing any up-front costs and eliminating any long-term maintenance.
